- Wire basket or wire trays are used for the purpose of arranging, cleaning and transporting surgical sets.

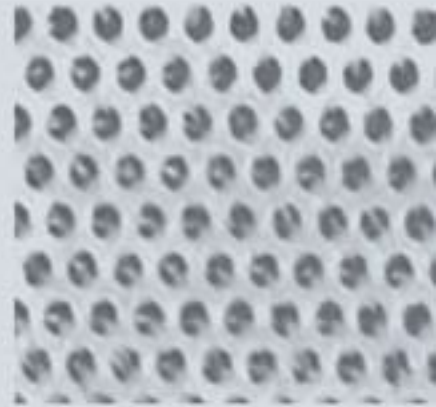

- Medical applications have caused the development of such products. Because of this, standard products are increased in variety and arranged in a separate catalog.

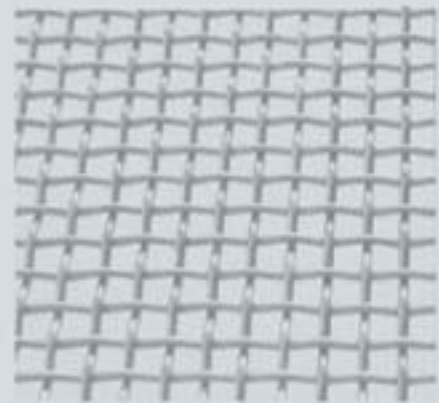

- It is aimed to present more alternatives to customers by using different types of wire meshes in production.

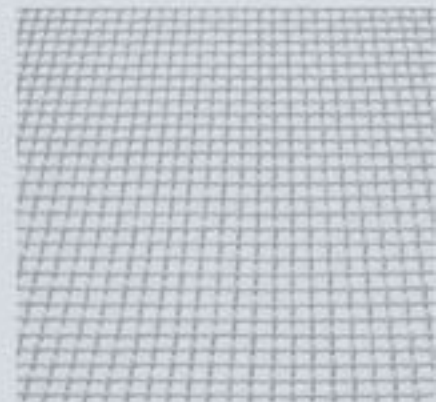

- Development studies of such products are being continued and new products will be added in near future.

- Requests received from customers for production of different types of products are also evaluated.

- There are wire baskets made of fine wire mesh for handling small parts.
